SUMMARY

Early-career full-stack developer with a technical background in Web Development (SENAI) and an ongoing degree in Information Systems (Cesmac). I have hands-on experience building complete web and mobile applications — including a B2B CRM built for a real client in the pharmaceutical distribution industry, currently in production. I work mainly with React, React Native, TypeScript and Node.js, from database design to deployment, with complementary knowledge of Python. Looking for my first professional opportunity as a developer, in Brazil (full-time) or international remote roles.

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer — Mapa Farma — client project

Maceió, Brazil · 2026

- Built a B2B mobile CRM for a pharmaceutical distribution company, replacing spreadsheet-based visit and order tracking with a system featuring a real-time map, visit logging, order management and sales statistics dashboards.
- Chose MapLibre/OpenStreetMap over Google Maps to meet the client's requirement for a free solution.
- Handled deployment and production maintenance on Render, with APK distribution via EAS Build; the application is live and in active use.

React Native (Expo) · Node.js/Express · Turso/libSQL · MapLibre

PROJECTS

Chute do Vidente — personal project — 2026 World Cup prediction game

- Designed and built a full-stack prediction pool with JWT authentication, private groups via invite code, and a gamification system using an in-app currency (crystals).
- Automated match scoring via the football-data.org API and implemented password recovery through transactional email (Resend).
- Deployed with a custom domain on Vercel (frontend) and Render (backend); over 25 users have participated.

Next.js · TypeScript · Tailwind CSS · Node.js/Express · Turso

FocusDrop — personal project — published on GitHub

- Built and published a productivity and wellness app with Pomodoro cycles, an animated SVG progress ring, and persistent notifications.
- Implemented mood tracking, weekly statistics, and draggable routine management; covered core logic with Jest unit tests.

React Native · TypeScript · Expo SDK 56

JobTracker API — personal project — first contact with Python

- Built a complete job-application tracking API with full CRUD, JWT authentication, and a ranking endpoint.
- Documented the API with Swagger and published the repository on GitHub.

Python · FastAPI · SQLite · JWT

TalentMatch — team project — SENAI

- Built, as part of a team, a full-stack recruitment/matching platform with authenticated user

flows; mediated disagreements over scope and design between teammates.

- In the final delivery week, the team migrated the entire project stack at a supervisor's request, and still delivered on time.

React · Node.js · JWT

EDUCATION

Information Systems

Centro Universitário Cesmac, Maceió, Brazil

1st semester · In progress

Technical Certificate in Internet Web Development

SENAI

2024 – 2025

SKILLS

Core: React · React Native (Expo) · TypeScript · Node.js/Express · REST APIs · SQL

Complementary: Next.js · Tailwind CSS · Python/FastAPI · JWT · Turso/libSQL · SQLite

Tools: Git · Vercel · Render · EAS Build · MapLibre
