SUMMARY

Full-stack developer looking for an internship or a junior developer role, as a full-time employee, intern or freelancer, remote or in Maceió, available to start right away. I built, solo and from scratch, a mobile CRM in use by a pharmaceutical distributor's sales team and a World Cup prediction game with more than 25 players. I work with React, React Native, TypeScript and Node.js, from database to deployment.

EXPERIENCE

Freelance Full-Stack Developer, Mapa Farma | client project | Maceió, Brazil | 2026

- Built, solo and from scratch, a mobile CRM for a pharmaceutical distributor's sales reps, with a map of Maceió's pharmacies, visit logging, orders and a sales dashboard, taking visit and order tracking out of spreadsheets.
- Chose MapLibre and OpenStreetMap over Google Maps to meet the client's requirement for a free solution, with no API key and no usage billing.
- Deployed the API on Render and shipped the Android app as an APK through EAS Build, with automated tests (node:test) on routes and business rules; the app is live and in use by the sales team.

Stack: React Native (Expo), Node.js/Express, Turso/libSQL, MapLibre, JWT

PROJECTS

Chute do Vidente | 2026 World Cup prediction game, personal project | 2026

- Created, solo and from scratch, a full-stack prediction game with JWT authentication, private groups joined by invite code and gamification with an in-app currency (crystals); more than 25 people played.
- Automated scoring with official results from the football-data.org API and built password recovery through transactional email (Resend); front end on Vercel, API on Render.

Stack: Next.js, TypeScript, Tailwind CSS, Node.js/Express, Turso/libSQL

Live: bolao-copa-samuel-lourencos-projects.vercel.app

FocusDrop | Android productivity app, personal project, open source on GitHub | 2026

- Built, solo and from scratch, an app with a Pomodoro timer, an SVG progress ring, a weekly routine run step by step and local notification reminders.
- Implemented mood tracking, a day-by-day history with an active-day streak and weekly stats with a daily goal, all stored on the device, with no account and no internet.

Stack: React Native, TypeScript, Expo SDK 56, AsyncStorage

JobTracker API | personal project | 2026: created a REST API for tracking job applications with Python, FastAPI, SQLite, JWT authentication, full CRUD and Swagger docs.

TalentMatch | team project, SENAI | 2025: mediated scope and design disagreements on a jobs platform (React, Node.js, JWT) and delivered on time despite a stack change in the final week.

Elemental Depths | Global Game Jam Alagoas, team | 2024: built with my team a game in C# and Unity during the jam.

EDUCATION

Information Systems, Centro Universitário Cesmac | 2026 – expected 2029

Technical Degree in Web Development (Informática para Internet), SENAI | 2024 – 2025

SKILLS

Core: React, React Native (Expo), TypeScript, Node.js/Express, REST APIs, SQL, Git

Complementary: Next.js, Tailwind CSS, Python/FastAPI, Java/Spring Boot, Angular, JWT, Turso/libSQL, SQLite, automated testing (Vitest, Playwright)

LANGUAGES

Portuguese: native | English: intermediate
