PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer — Mapa Farma (client project)

Maceió, AL · 2026

React Native (Expo) · Node.js/Express · Turso/libSQL · MapLibre

- Built a B2B mobile CRM for a pharmaceutical distributor, replacing spreadsheet-based visit and order tracking with a real-time map system.
- Chose MapLibre/OpenStreetMap over Google Maps per the client's requirement for a free solution.
- Implemented real-time pharmacy map visualization with a user-customizable layer, while preserving the integrity of real registered pharmacy data; also built visit logging, order management, and sales statistics dashboards.
- Deployed and maintained the app in production on Render with APK via EAS Build; live and in active use.

PROJECTS

Chute do Vidente

Personal project — 2026 World Cup prediction game

Next.js · TypeScript · Tailwind CSS · Node.js/Express · Turso

- Designed and built a full-stack prediction pool app with JWT auth, private groups via invite code, and a fictional-currency gamification system.
- Automated match scoring via the football-data.org API and implemented password recovery via transactional email (Resend).
- Deployed with a custom domain on Vercel (frontend) and Render (backend); 25+ users participated.

JobTracker API

Personal project — first hands-on Python project

Python · FastAPI · SQLite · JWT

- Built a complete job-application tracking API with full CRUD, JWT authentication, and a ranking endpoint.
- Documented the API with Swagger; published the repository on GitHub.

TalentMatch

Team project — SENAI

React · Node.js · JWT

- Built a full-stack recruitment/matching platform as part of a team, with authenticated user flows; mediated scope and design disagreements between team members.
- In the final delivery week, the team migrated the entire stack under a supervisor's requirement and still delivered on time.
- Deployed on Vercel (frontend) and Render (backend).

FocusDrop

Personal project — published on GitHub

React Native · TypeScript · Expo SDK 56

- Built and published a productivity/wellness app with Pomodoro cycles, an animated SVG progress ring, and persistent notifications.
- Implemented mood tracking, weekly stats, and draggable routine management; covered core logic with Jest unit tests.

EDUCATION

Software Engineering

Centro Universitário Mario Pontes Jucá (UMJ), Maceió, AL

2026 - 2030 · In progress

Technical Degree in Web Computing

SENAI

2024 - 2025

SUMMARY

Software Engineering student with hands-on full-stack web and mobile development experience, including a paid commercial project for a pharmaceutical distribution client. Comfortable across the full stack — React, React Native, Node.js, TypeScript, and Python — from database design to production deployment. Currently seeking full-time roles in Brazil and international remote opportunities.

SKILLS

Languages

JavaScript TypeScript Python

Frontend

React React Native (Expo) Next.js Tailwind CSS

Backend

Node.js Express FastAPI REST APIs JWT

Databases

SQL MySQL PostgreSQL Turso/libSQL SQLite

Tools & Testing

Git Vercel Render EAS Build MapLibre Jest
